

# National Metabolomics Workshop and Symposium

August 2-3 /// Virtual Seminar

## Cellular Signaling and Metabolomic Networks

ONLINE VIA ZOOM /// OPEN TO EVERYONE

Metabolomics is a fast-growing area in modern biological and medical sciences. To keep up with the technological advancement and the frontier research, we are organizing a virtual Metabolomics Workshop and Symposium on:

**August 2 -3, 2021**

This online workshop provides “hands-on” training in metabolomics sample preparation, targeted and untargeted metabolomics, as well as imagining metabolomics. It aims to teach the art and science of conducting metabolomics experiments through detailed protocols/tutorials, application examples and discussions to achieve a thorough understanding of the theory and practice of metabolomics in many different areas of biology and medicine.
